

Daniel Hoang

Danny.hoang.denver@gmail.com | 720-240-1352 | www.linkedin.com/in/dhoang-mines | <https://github.com/ActingKoi>

Education

Colorado School of Mines

Expected Graduation: May 2027

Bachelor of Science in Computer Science

GPA: 3.5/4.0

Relevant Coursework: Data Structures & Algorithms, Software Engineering, Computer Organization, Systems Programming, Mobile Applications Development, Discrete Math, Database Management, Intro To Machine Learning, Deep Learning

Skills

Languages: Python, C++, Java, Lua, SQL, Kotlin

Developer Tools: Git, Linux, Databricks, Android Studio, AutoCAD, SolidWorks, Microsoft Office, LaTeX

Libraries & Frameworks: PostgreSQL, Firebase, Pandas, Matplotlib, Plaid API, PySpark, Delta Lake, Jetpack Compose

Work Experience

R.O.C. Data Analyst Intern

June - August 2026

Xcel Energy

Golden, CO

- Built a Python/PySpark feature-engineering pipeline that identifies turbine alarms predictive of icing conditions across 23 wind farm sites, feeding a downstream ML prediction model and writing results to Delta Lake on **Databricks**.
- Automated multi-site **SCADA** alarm data ingestion via **REST API** integration, standardizing alarm naming across different turbine manufacturers into one consistent schema for fleet-wide analysis.
- Designed and shipped a scheduled **Databricks ETL pipeline** that replaced a manual monthly reporting process, computing fleet-wide KPIs (generation, availability, downtime) for leadership review and validating outputs against legacy reports for accuracy.

Engineering Intern

January - May 2023

Namaste Solar

Denver, CO

- Designed 5+ solar panel models using **AutoCAD**, reducing design iteration time by 20% and improving installation efficiency for clients.
- Updated and maintained existing solar panel models, ensuring compliance with company and customer standards

Projects

Hungry (Android Restaurant Discovery App) | Kotlin, Jetpack Compose, Firebase

- Built a Tinder-style restaurant discovery app with physics-based swipe gestures and smooth card animations
- Implemented an interactive custom map with pinch-to-zoom, pan gestures, GPS-coordinate-mapped restaurant pins, and a dynamic label system that renders contextually at zoom thresholds
- Integrated **Firebase Authentication** (email/password + guest mode) and Firestore to hold friend requests, friend lists, and favorite restaurant visibility in real time

Personal Finance Tracker | Python, Plaid API, Data Analysis

- Built a **Python** app that fetches and analyzes financial transactions from **Plaid**, providing insights into spending patterns
- Implemented robust storage to maintain accurate, persistent transaction records, leveraging **JSON** and **file I/O**
- Designed modular analysis and visualization tools to summarize spending by category, merchant, and time period, demonstrating **data aggregation, pandas, and matplotlib skills**.

Leadership & Activities

Gates Scholar, SASE Media Chair & festival volunteer, GameDev Club member, ACM member
